✅ Correct Workflow (Professional Way)

Do NOT create new projects for each drawing. That would be amateur and inefficient.

You should have **ONE project file**.

Everything comes from that.

Let me explain the correct workflow clearly.

ONE Model

Multiple Views

Multiple Sheets

Multiple Exports

That's it.

🔹 Step 1 — Build ONE Typical Floor Model

You model:

- Walls
- Doors
- Windows
- Stairs
- Lift
- Washrooms

Just once.

This is your **master model**.

🔹 Step 2 — Duplicate the Floor Plan View (NOT the model)

In Revit:

Right-click the floor plan →
Duplicate View → Duplicate

Now you have:

- Architectural Plan
- Electrical Plan
- Plumbing Plan
- Network Plan

All referencing the SAME geometry.

You are not copying walls.
You are copying the *view*.

Huge difference.

🔹 Step 3 — Rename Each View Properly

Example:

- `TYPICAL FLOOR - ARCH`
- `TYPICAL FLOOR - ELECTRICAL`
- `TYPICAL FLOOR - PLUMBING`
- `TYPICAL FLOOR - NETWORK`

Professional naming = easy marks.

🔹 Step 4 — Control Visibility in Each View

This is key.

Architectural View

Show:

- Walls
- Doors
- Windows
- Stairs
  Hide:
- Electrical
- Plumbing
- Data

Electrical View

Show:

- Lights
- Switches
- Sockets
- Wiring
  Hide:
- Furniture
- Plumbing
- Extra clutter

Plumbing View

Show:

- Fixtures
- Pipes
- Risers
  Hide:
- Electrical
- Furniture

Network View

Show:

- APs
- Switch
- Cabling
  Hide:
- Plumbing
- Electrical

You do this using:

- **Visibility/Graphics (VG)**
- Or View Templates (cleaner method)

🔹 Step 5 — Create Separate Sheets

Then you place each view on its own sheet:

- Sheet 1 → Architectural
- Sheet 2 → Electrical
- Sheet 3 → Plumbing
- Sheet 4 → Network

Each exported separately as DWG + PDF.

❌ What NOT to Do

Do NOT:

- Copy the model into 4 different files
- Redraw the plan 4 times
- Create separate Revit projects
- Edit one view and forget others

That’s how inconsistencies happen.

💡 Why One Model is Better

If you move a wall:

- It updates in all views automatically.

If you copy projects:

- You’ll forget to update something.
- You lose professionalism marks.

🔥 The Correct Mindset

Revit = single source of truth
Views = filtered versions
Sheets = presentation
DWG/PDF = submission

Final Answer

👉 One Revit project
👉 One modeled typical floor
👉 Duplicate views
👉 Control visibility
👉 Export separately

That’s how professionals do it.
